CHAS. N. GOULD, DIRECTOR
NORMAN, OKLA.

Correlation of the top sands of the principal producing horizon of the Cement Oil Field, Chickasha Gas Field (Romer horizon) and the Carter-Knox Oil Field. The top of this sand horizon is believed to be 300-400' above the base of the Permian Formation.

** True limestone north of the Anadarko Basin; probably anhydrite or gypsum to the south, but logged as lime by drillers.*
