F O R E W O R D

Section I of this report comprises the results of Second Order Traverse and Second and Third Order Leveling executed in Southwestern Oklahoma under Relief Projects set up for the purpose of furnishing emergency employment to engineers, surveyors and other professional and semi-professional personnel.

The work was initiated in December 1933, under the Civil Works Administration. The first project was sponsored by the U.S. Coast and Geodetic Survey under direct supervision of Professor N.E.Wolfard as its State Representative. Continuing projects were sponsored by the Oklahoma State Conservation Commission in cooperation with the Federal Emergency Relief Administration and the Works Progress Administration, under which operations are now in progress. The Oklahoma Planning and Resources Board is sponsor of the current project. Professor Wolfard has administered the survey throughout.

All operations have been executed under U.S. Coast and Geodetic Survey specifications for the respective order of process. Obviously many difficulties were encountered due to the necessary employment of untrained personnel, to "shifting" and part-time employment periods and to lack of high grade equipment. Notwithstanding these drawbacks, "results to specifications" have been insistently demanded and secured as evidenced by numerous checks through intersecting traverses. The data have been used and checked by the U.S. Army Engineers, the U.S. Bureau of Reclamation and other engineering organizations requiring a high degree of accuracy. An occasional error in description, elevation or position is bound to appear in operations of this magnitude and information relative to any apparent error or discrepancy should be forwarded to the Office of the Oklahoma Geological Survey at Norman.

Permanency of monument location has been sought for but in some instances has been difficult to secure due to natural conditions combined with traverse performance limitations and justifiable cost. In some instances, monuments were placed closer than desirable to traveled ways or in other less protected locations due to consideration of measurement and sight facility without undue expense for "clearing line."

These monuments as well as other government survey monuments represent real money expended, but commensurate with this expenditure is a real basic value to the engineer, the planner, the geologist, the geophysicist, the terrestrial research man, the builder, the property owner, the military commandant, therefore to the general public who are the clientele and benefactors of the artisan and planner.

In the interest of preserving the maximum number of these control monuments there has been incorporated herein "Instructions for Resetting Control Survey Monuments and Bench Marks."

A Rectangular Coordinate system based on Lambert Conformal Projection has been established for Oklahoma and projection tables computed by the U.S.Coast and Geodetic Survey. These tables are appended to Section I.

An index map showing the location and identification numbers of the several traverses is appended. The data have been arranged in alphabetic order of traverse and in numerical order of stations within the traverse.

In order to maintain a nominal scale-factor, Oklahoma has been divided into a North Projection Zone and a South Projection Zone. These zones overlap 20 minutes of latitude thus placing each of the central East-West tier of counties wholly subject to either the North or South Projection. An index map showing the zone boundaries is appended. For zone borderline traverses, rectangular coordinates based on both the North and South Projections have been computed as well as the Geographic positions (latitude and longitude).

To facilitate progressive publication and distribution it was deemed expedient to divide the state into four districts, viz., NE, NW, SW & SE; the division lines being approximately parallel of latitude 35 degrees 30' and the 98th Meridian.

Section II of this report comprises the results of First Order and Second Order Spirit Leveling executed in Southwestern Oklahoma by the U.S. Coast and Geodetic Survey. This work has been accomplished periodically during the past thirty years. The major portion of the operations were carried on during the critical years of the recent depression and were financed from emergency relief funds.

Results of First Order and Second Order Triangulation executed in this area by the U.S. Coast & Geodetic Survey have not been included herein for the reason that a portion of the same is now available in bulletin form at the office of the Superintendent of Documents Washington, D.C., and the remainder of the data may be secured, on request, from the Director of the U.S. Coast and Geodetic Survey, Washington, D.C.

Appended to Section II is an index map showing the location and arbitrary designation numbers of the various level circuits for the purpose of facilitating reference to the published data. The data have been arranged according to the numerical order of the arbitrary designation numbers. Also appended is a list of publications of the U.S. Coast and Geodetic Survey which treat in detail of the field and office procedure in executing various types of surveys. Special Publications, No's., 193 and 194 entitled respectively, "Manual of Plane-Coordinate Computation" and "Manual of Traverse Computation on the Lambert Grid" will be of special interest and value in the fullest utilization of the data presented in this volume.

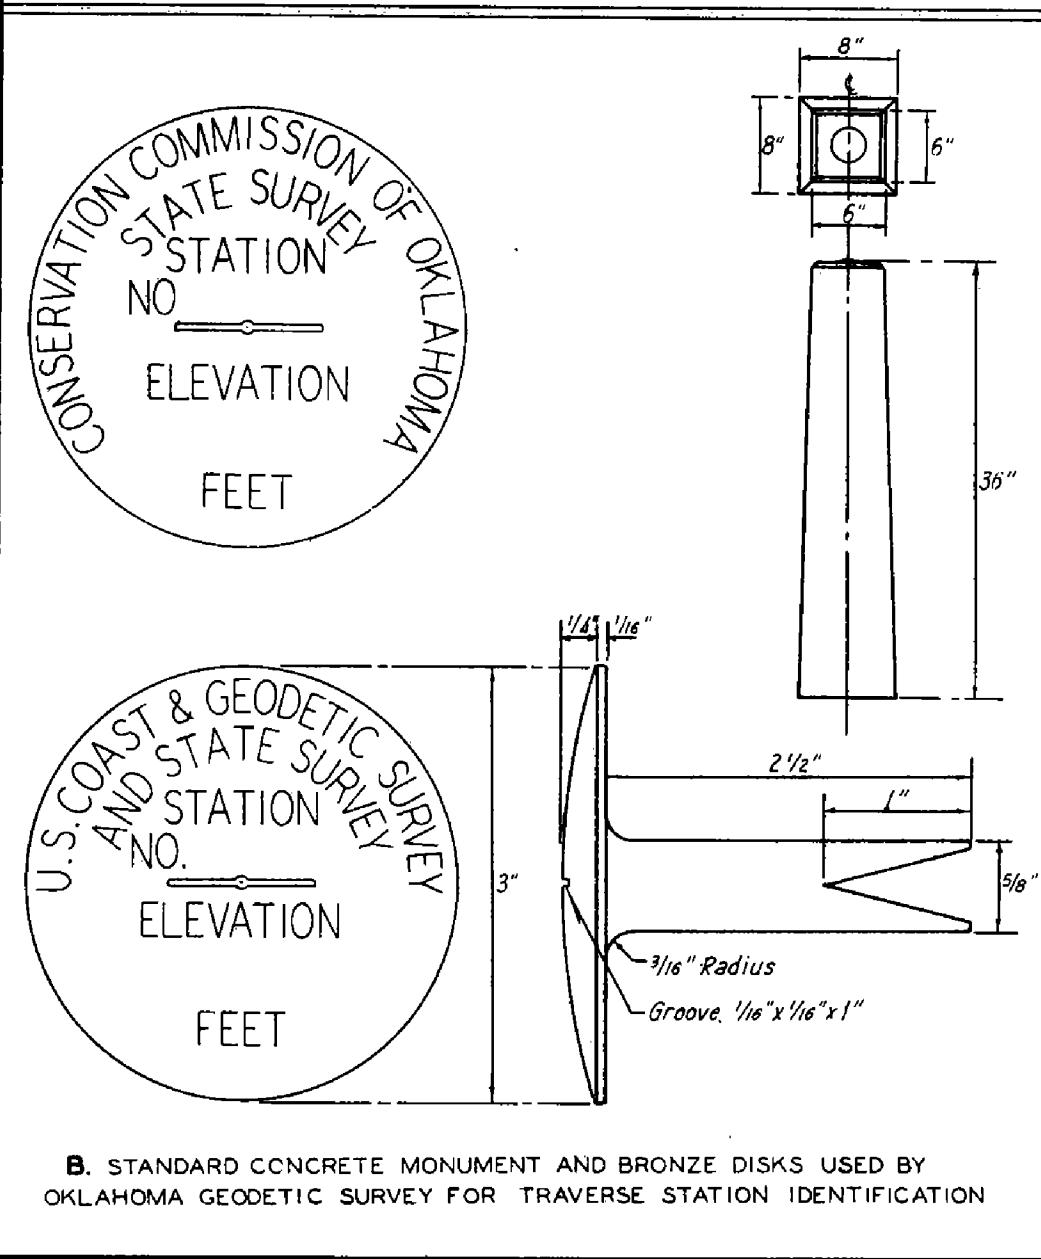

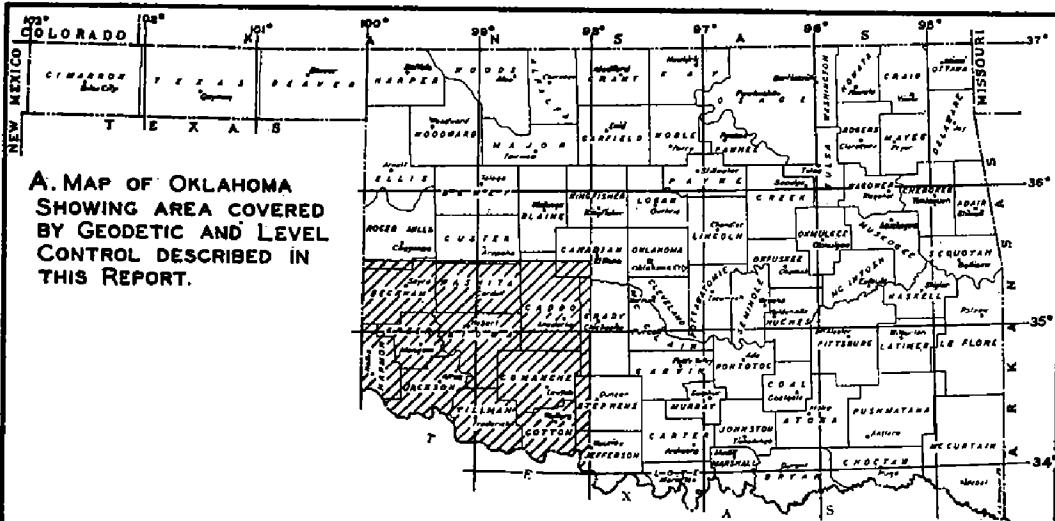

Engineers and surveyors have not availed themselves of the wealth of field control data and published information executed by the U. S. Coast and Geodetic Survey. The issuance of this and succeeding volumes of "Traverse and Leveling in Oklahoma," in addition to the publications of the Coast Survey will provide effective uniform vertical and horizontal control data throughout the western portion of Oklahoma and a considerable fund of data for the Eastern portion of the State.

Through the state coordinate grid described above, the engineer, and the planner are afforded uniform base control of geodetic scope and accuracy which can be used with the facility and simplicity of plane surveying and computation.

It is anticipated that public bureaus and corporate and private firms engaged in surveying, mapping, investigating and charting of natural resources and in the planning and coordinating of public and private enterprise will glimpse the utility and facility of this uniform accurate control data at their command and make immediate, continuous and extended use of the same.

N. E. Wolfard.

Plate I

THE PLANE COORDINATE SYSTEM
For
OKLAHOMA

In order to employ a system of rectangular coordinates throughout an extended area, and hold the scale error determinant and within reasonable limit, it is necessary to select a type or method of projection which will conform to the area under consideration.

The Lambert Conformal Projection has been considered as most adaptable to the State of Oklahoma by the U. S. Coast and Geodetic Survey, which bureau has established a standard system of projection for each state in the Union. The following paragraphs are quoted from the Bureau's Special Publication #193:-

NEED OF PLANE SYSTEMS COVERING GREATER AREAS

"The progressive engineers of the country have become convinced that there is need for plane-coordinate systems that can be extended over wider territory without the introduction of discrepancies that vitiate the value of the work. Of course if all engineers would use geodetic computations there would not be need for such aids, but they do not favor this method of handling the situation. Work is started as a limited project for which a local coordinate system is amply sufficient and it is only when the undertaking is broadened to wider fields that the difficulties arise. When it becomes necessary to make use of the national control surveys to serve as basis for local work, the need for the more extensive coordinate systems is most painfully evident. It is quite a task to base local engineering work on basic control that has been computed geodetically; that is, the results of which are expressed in latitudes, longitudes, azimuths, and lengths. It can be done, of course, but not as satisfactorily as it could be done if the control work were computed directly on a plane-coordinate system. These are the reasons that have led to the insistent demand for the establishment of systems for whole states or for as large sections of each state as could be constructed without the introduction of too many complications in the method of using the system when it is once established."

ADVANTAGES TO LOCAL SURVEYORS

"The Coast and Geodetic Survey has already some 40,000 miles of control surveys fairly evenly distributed throughout the country at large. This network is being rapidly extended, and soon any place in the country will be near enough to this control system to make it a valuable asset as a basis for any engineering work. If the extended plane-coordinate systems are established and this control work is computed on the resulting grids, then the local surveyor can start his work from neighboring control points and make all of his computations on the general plane system just as he would do on any local system that he might establish. He would have the added advantage that his work would be coordinated with the general control system of the country and, therefore, if his work should be preserved, it could form the control for future engineering operations in that vicinity."

Control Traverse executed under the sponsorship of the Conservation Commission of Oklahoma and its successor bureau, the Water Resources Division of the Oklahoma Planning and Resources Board in cooperation with the Federal Works Progress Administration and its antecedents, supplements the triangulation control which has been established in Oklahoma by the U. S. Coast and Geodetic Survey.

With the plane-coordinates made available through this and succeeding publications together with current and future publications of the U. S. Coast and Geodetic Survey, the engineer and surveyor will rarely need to employ geodetic computation procedure except in passing from one projection zone to another or in converting his data from one projection system to another. The familiar latitude and departure procedure will suffice in all but extraordinary cases. It is anticipated that the engineer will avail himself of publications heretofore mentioned treating of computation methods and procedure, consequently they have been omitted herein.

Methods, modes, designs, procedures, as affecting the progress of civilizations, have passed or are passing through the stages of theoretical or radical; visionary or ultra modern; practical or modern; unpopular or obsolescent; outmoded or antique. Where in the scale of progress are our methods and procedure in surveys and survey records? Is our mapping policy and accomplishment commensurate with industrial, commercial, civic or military requirements? Is our national, state, community and city planning systematic, basic, coordinated? Would common uniform, accurate elevations and positions (both plane and spherical coordinates) computed and adjusted to a definite mathematical spheroid conforming very closely to the mean sea level curvature of the North American Continent be desirable and

economical and facilitate long time coordinated planning? The Oklahoma Plane Coordinate system affords just such vehicle of control.

AZIMUTHS

In obtaining values of azimuth from the tables of positions and coordinates, it is well that the reader consider some of the scientific aspects of this subject. There are three values of azimuth determined at each point. A definition and brief discussion of each is presented below.

1. ASTRONOMIC AZIMUTH

Astronomic Azimuth is the value obtained directly from observations on some celestial body.

For precise work in the United States, this body is invariably the star Polaris. In the determination of Astronomic Azimuth, the values are referred to that point on the celestial sphere defined by the direction of the force of gravity at the occupied station. In other words, that point on the celestial sphere intersected by the direction of the plumb line, extended upward. This point is known as the Astronomic Zenith.

Astronomic Azimuths are observed values and do not appear in the tables of positions.

2. GEODETIC AZIMUTH

Geodetic Azimuth is the astronomic azimuth corrected for the deflection of the vertical.

Geodetic azimuth is referred to that point on the celestial sphere defined by the normal to the spheroid of reference at the occupied station, and known as the geodetic zenith. The spheroid of reference on which all the published data are based is the Clarke Spheroid of 1866. The astronomic zenith and the geodetic zenith do not coincide because the actual figure of the earth is not a perfect spheroid, but a geoid, containing bumps and irregularities.

The spheroid of reference is a theoretical surface conforming as closely as possible to the actual surface, or, in other words, the mathematically perfect spheroid most nearly approximating the actual figure of the earth. The angle at the observer's station, between the astronomic and the geodetic zeniths, is known as the deflection of the vertical.

The deflection of the vertical, and the correction to azimuth for it in the State of Oklahoma are usually small, never more than a few seconds, and are therefore negligible to the practising engineer.

The azimuths given in the tables of geodetic positions in this publication, and in all publications of the U.S. Coast and Geodetic Survey, and the U. S. Geological Survey, are geodetic azimuths. They are invariably reckoned in a clockwise direction from true south.

The column designated "Back Azimuth" gives the azimuth over the line in the reverse direction. It will be noted that this does not differ from the forward azimuth by exactly 180° . This difference is due to the convergence of the meridians. The azimuths at the stations at either end of the line are measured from the true meridian through the given station. Since the meridians of the two stations converge to the north and are not parallel, these azimuths will differ. The amount of difference depends on the difference in longitude between the two stations, and mean latitude of the line. In the special case of a true north and south line, the meridians are coincidental and the difference between forward and backward azimuths therefore is exactly 180° .

3. GRID AZIMUTH

Grid azimuth is the direction of a line referred to the control meridian of an arbitrarily chosen system of plane coordinates.

In this publication, this system of rectangular coordinates is placed upon a conical surface, secant to the spheroid of references. This is known as the Lambert Projection. The central meridian is the Y axis of the system of coordinates and is coincident with 98th meridian of longitude.

Grid azimuth will differ in amount from true geodetic azimuth varying with the

distance from the central meridian or Y axis and in lesser degree with the distance from the X axis. Since the meridians converge to the northward, the correction to true azimuth to obtain grid azimuth will be positive in sign on the west side of the central meridian and negative on the east side. The value of this correction is the quantity theta, derived from the computation of plane coordinates from geodetic positions.

The azimuths noted and derived from plane coordinates in this publication are grid azimuths. They are reckoned in a clockwise direction from the south.

MONUMENTS AND MARKERS.

On initiation of these control surveys, a standard precast concrete monument in the form of a pyramid frustum was adopted. A sketch and dimensions of the same are shown on Plate I-B. On this plate also are shown the types of bronze disks employed for stamping station identification.

Unless otherwise stated, all stations consist of the standard concrete monument and bronze disk.

The station descriptions should carry sufficient information and "local ties" to insure future recovery and also indicate whether or not the monument remains in its original position. Some of these monuments are bound to be disturbed by the progress of development. It is hoped that in many instances the monument may be reset and the record of new location and elevation preserved as set forth in the instructions following.

I N S T R U C T I O N S For Resetting Control Survey Monuments and Bench Marks.

It seems inevitable that a number of position monuments and bench marks which have been set by the U. S. Coast and Geodetic Survey and by the U.S. Geological Survey and relief organizations working in cooperation with the above agencies must necessarily be moved in the improvement and extension of highways.

It should be kept in mind that two distinct classes of monuments will be encountered, Viz; bench marks, perpetuating elevations only, and triangulation and traverse monuments perpetuating both elevation and position. The bronze disk stamping will indicate the class of each monument. Monuments bearing elevation only are stamped with designation letter, number and date, thus, - M 107 1934, and may or may not be stamped B.M. Triangulation stations show the triangle form molded on the bronze plate, together with the name of station and date established. Triangulation reference and azimuth monuments bear the name of the triangulation station and "Ref." or "Azim" respectively. Traverse stations bear numeral letter, numeral designation, thus - 22-A-6, together with date and TT (Transit Traverse.)

IN MAKING INQUIRY OR REFERRING TO ONE OF THESE MONUMENTS ANYWHERE, ANY TIME, TO ANYONE, THE COMPLETE DESIGNATION STAMPING SHOULD BE GIVEN FOR COMPLETE IDENTIFICATION.

The U.S. Coast and Geodetic Survey has issued the following general instructions in regard to resetting bench marks perpetuating elevation only:-

"With special reference to the matter of relocating bench marks when they are found to be in the way of construction, repair, or maintenance projects, this bureau has worked out a routine method of handling these cases as follows:

"As soon as it becomes known that a mark must be moved, a letter should be sent to the Director, U.S. Coast & Geodetic Survey, Washington, D.C. Attention Section of Leveling, stating the necessity for moving the mark and giving its designation. The designation consists of the letters and numbers found to have been stamped with dies on the disk. It is desirable to furnish a rubbing of the disk as well. A rubbing can be made by placing a piece of medium weight paper over the disk, then rubbing over the paper with a hard pencil to bring out the legend cast in the disk, especially the letters and numbers stamped on it with dies.

"Upon receipt of this information, this office will send out a new disk properly stamped to show that it has been reset. Necessary instructions for the establishment of the new mark and the transfer of elevation will be sent.

"The proper procedure, in most cases is to establish the new mark in a safe place nearby and transfer the elevation from the old mark to the new one by means

of an engineer's level and rod. The levels should be run in duplicate to avoid the possibility of large errors and all readings should be made to 3 decimal places in order to preserve the accuracy of the original elevation.

"The old mark should not be disturbed until the observations involved in the transfer have been checked by the observer or the recorder. An assumed elevation for the old mark may be used in the transfer since what we are primarily concerned with, in a case of this sort, is the difference in elevation between the old mark and the new one established to replace it.

"After the new mark has been established and the elevation transferred to it, the old disk should be broken out and returned to this office in a franked mailing sack which will be supplied for the purpose. A complete report on the action taken including a description of the location in which the new mark is established and a copy of the field notes involved in the transfer of elevation, should also be forwarded to this office. A franked envelope will be furnished for this purpose."

The cooperation which individuals and organizations may extend to this office in preserving the bench marks will be a service not only to this bureau and other government surveying organizations, but to anyone who may have occasion to use the marks.

Triangulation stations, triangulation reference and azimuth monuments shall not be moved or disturbed except under specific instructions from the U.S. Coast & Geodetic Survey or authorized representatives.

Traverse stations may be reset under the following procedure:-

Immediately it be determined necessary to remove or reset a monument, notice to this effect should be mailed to N. E. Wolfard, University of Oklahoma, Norman, Okla., So long as relief projects are in operation, cooperation in this work will be gladly given, but once the relief funds are cut off and the organization disbanded there will be no opportunity for field cooperation. It will be necessary that the monuments be moved by highway parties operating in the vicinity and all notes and data pertaining to the resetting of the same be forwarded to Mr. Wolfard's office at Norman.

DO NOT TRY TO RESET THE MONUMENT AT ELEVATION IDENTICAL WITH FORMER POSITION.

The new position for the monument must be carefully selected so that intervisibility is secured with preceding and succeeding monuments in the traverse.

In order to determine the position (co-ordinates) of the monument as reset both the distance and direction of "Shift" must be carefully observed and recorded.

Carefully set the transit over the monument to be moved; set a substantial Hub (denoted A, on the accompanying sketch) with tack, at a convenient distance in the direction which the monument is to be moved; and at approximate right angle to the general course of the Traverse; carefully measure and record, - check measure and record the distance between monument and Hub A. The tape must be held horizontal or if slope measure is taken then the difference of elevation of the points should be determined (by transit or hand level) and recorded so that the horizontal distance may be computed.

Next plunge the telescope and set another hub, (denoted B on the accompanying sketch) across the R.C.W. With the transit still over the undisturbed monument carefully measure the angles from the preceding traverse station to Hub A, and from Hub A to succeeding Traverse Station. Each of these angles should be read 6 D/R and the explement or closing angle should also be read 6 D/R giving closure not exceeding 8 seconds. Now set the transit carefully over Hub A, - center on the monument and establish tack point in Hub; carefully check the last operation since on it depends the accuracy of direction of "Shift".

In transferring the elevation from the old station to the new one the same procedure will be followed as recommended by the Coast & Geodetic Survey for the transfer of elevations in resetting the bench marks as set forth above.

The monument may now be moved and reset in concrete; careful manipulation and tamping will be necessary in order that the monument will not "season and settle" off line. The transit will be intermittently centered on Hub B, then on the monument to insure alignment.

The distance from Hub A to the new position of monument is now measured and recorded in the same manner as the previous measurement from the original location.

Traverse in Southwestern Oklahoma

The difference between these measurements represent the distance of "Shift."

In case it seems desirable to postpone resetting of the monument until construction work has been finished, a duplicate set of hubs should be set so as to insure perpetuation of line and position until the monuments shall have been reset, since traverse stations perpetuate both elevation and position it is necessary that intervisibility be maintained between adjacent monuments. This must be kept in mind in choosing a new location for any given traverse point.

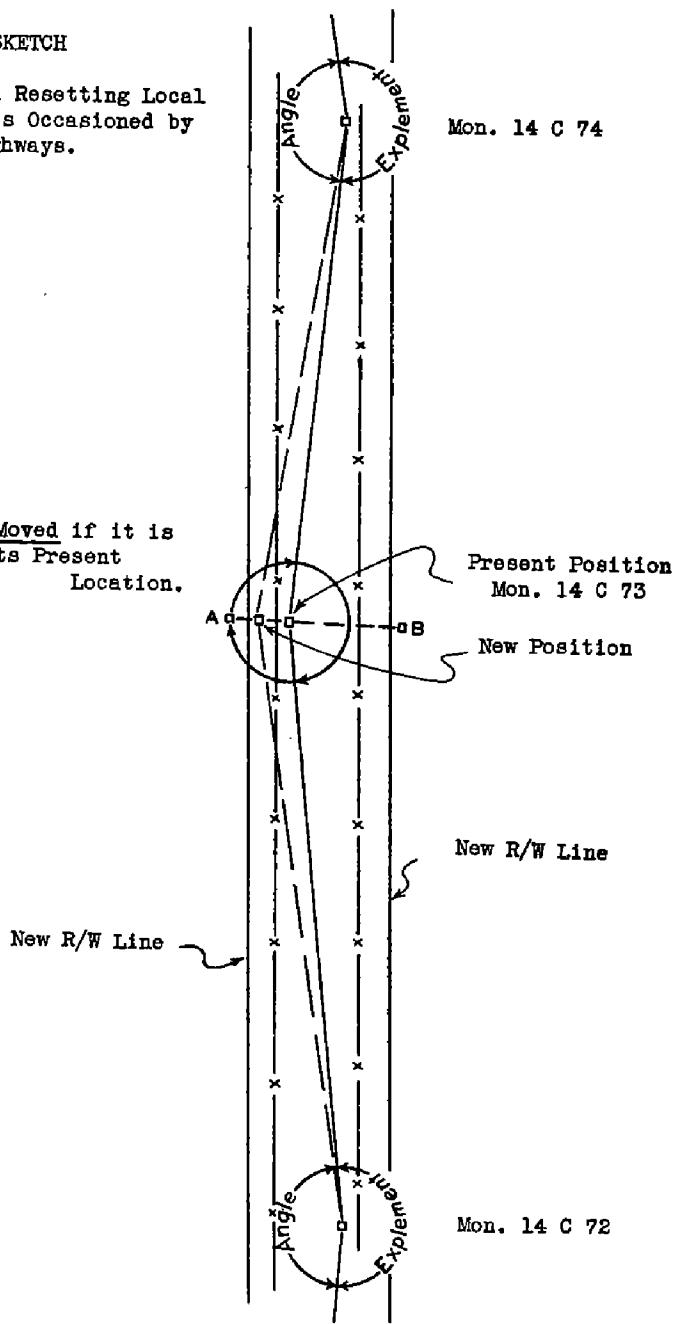

It will be necessary to exercise a little more caution and precision in measuring both distance and angles than is used in ordinary highway work. The specifications for second order traverse call for a maximum error in angle closure of six seconds and a maximum error in linear closure of 1 in 10,000.

All data pertaining to the moving of monuments should be recorded in the regular field book for the job and abstracts of all data forwarded to the respective offices as noted above. A sketch showing details of transfer operations and bearing North indicator should accompany the notes.

See 21-J-14 TT 1935; Junction Station.

Traverse 25-A; Stephens, Cotton & Jefferson Counties.

Duncan Tri. Sta., to Hastings Tri.Sta.,
South Projection.

Duncan Tri.Sta., Stephens Co., About 5 mi.W.& $1\frac{1}{2}$ mi.S. of Duncan in sec.16,T1S, R8W. The station is marked according to Note 1.

Reference Mark destroyed.

The quarter sec. stone common to secs.9 & 16 is 1442 ft. from station in azimuth $217^{\circ}29'00''$.

The station was recovered in 1933 by N.E.Wolfard and found in good condition except that it was buried beneath 2 ft. of earth formerly used as foundation for a 1600 bbl.water tank (oil field); broken pieces of concrete were found buried at the original location of the reference mark; a new reference mark was established 379.54 meters (1245.2 ft.) from station in azimuth $5^{\circ}06'41''$. The reference mark is a standard USC&GS & State Survey Tablet set in a precast concrete block 6" square and 3 ft.long, the top being flush with surface of the ground; tablet was stamped Az.R-25-A-1934; the corner stone originally used as reference had been destroyed.

F O R E W O R D

Section II of this publication contains elevations and descriptions of all adjusted bench marks of the U.S. Coast & Geodetic Survey in Southwestern Oklahoma. These bench marks have been established over the past 30 years and, no doubt, many of the earlier ones have been destroyed, and others no longer fit their descriptions. Any information relative to condition of these marks and the adequacy of their descriptions will be appreciated by the aforesaid bureau or Oklahoma Geological Survey.

The leveling executed by the U.S. Coast & Geodetic Survey in Oklahoma is divided into first and second order. First order levels are of the highest grade; are run in forward and backward directions, and have an accuracy corresponding to an allowable discrepancy of $4 \text{ mm } V\sqrt{K}$, where K is the distance from the starting point in kilometers. The second order leveling has been accomplished mostly in recent years. Its accuracy corresponds to an allowable discrepancy of $8 \text{ mm } V\sqrt{K}$; and it is run with the same equipment as used on first order work, but in one direction only. However, the distances between fixed elevations along lines of second order leveling are relatively short, and the actual error of any bench mark is very small.

The bench marks established are of several types as described by reference notes to be found on page 132.

| 2. Traverse Station Mark. | 5. Magnetic Station Mark. |
| 3. Reference Mark. | 6. Hydrographic Station Mark. |

GENERAL NOTES DESCRIBING DIFFERENT FORMS AND MARKINGS OF
BENCH MARKS CONNECTED WITH THE LEVEL NET.

NOTE 1.-This type of bench mark is the red metal disk designed by the Coast and Geodetic Survey, lettered "U. S. Coast & Geodetic Survey, B. M. \$250 fine or imprisonment for disturbing this mark." The disk is 3 inches in diameter, with a 3-inch tenon upon the back for setting it, and is set in cement flush with a horizontal or vertical surface. In the latter case a horizontal mark cut on it, or the horizontal mark of a cross, is the bench mark.

NOTE 2.-This type of bench mark has the same lettering as that referred to in note 1, and is a 3-inch red metal cap, somewhat curved, screwed upon a 4-foot or 4½-foot iron pipe set in the ground and usually cemented at the base, from 4 to 6 inches being exposed above the ground. The base of the pipe is split and spread to a diameter of about a foot. For placing the foot of the level rod accurately a square or a small circle was cut in outline in the center of the cap.

NOTE 3.-This type of bench mark is a stone post 4 ft. long set in the ground with 6 inches exposed, and this portion is dressed. The upper surface is 6 inches square and plane, being marked in the center with a ½-inch copper bolt, 2 inches long, set flush with the surface; the top of the bolt is the bench mark; the upper surface of the stone is lettered "U.S.B.M." and when the post is set near the railroad these letters face the track.

NOTE 4.-This type of bench mark is a brass or copper bolt, usually set in lead or cement, flush with a horizontal or vertical surface. In the latter case, a horizontal mark cut on the face of the bolt, or the horizontal mark of a cross, is the bench mark.

NOTE 5.-This type of bench mark is the bottom of a hole in a horizontal surface, 25 millimeters square, 4 millimeters deep, lettered "U.S.B.M."

NOTE 6.-Where a hydrant has been used the bench mark is the highest point, a brass nut used as a check valve. These may not be considered stable points. They are, however, the most accurately defined of the city bench marks.

NOTE 7.-Bench marks referred to in this note are upon a Coast and Geodetic Survey triangulation station mark or witness mark, a terra cotta pipe filled and surrounded with concrete, from which projects the point of a nail. The bench mark is a square hole cut near the nail.

NOTE 8.-This type of a bench mark is the smooth bottom of a round cut, or shallow drill hole, 8 millimeters deep and 25 millimeters in diameter, in horizontal stone surface.

NOTE 9.-Bench marks referred to this note are upon a Coast & Geodetic Survey triangulation station mark, a terra cotta pipe filled and surrounded with concrete, from which projects the point of a nail, against which the rod was held.

NOTE 10.-Bench Marks referred to this note consists of a copper bolt in a bench mark stone, set 4 ft. underground, covered by a 3-inch iron pipe marked "U. S. B. M."

NOTE 12.-The top of a copper bolt cemented in the top of a 4-foot reinforced concrete post, 7 inches square, with edges beveled, projecting about 6 inches from ground, with top marked "U.S.B.M."

NOTE 13.-The surface within an outlined square, 1 inch on each side, on a horizontal surface of masonry or metal, unlettered.

NOTE 14.-The surface within an outlined square, 1 inch on each side, on a horizontal surface of masonry, lettered "U. S."

NOTE 15.-The bottom of a hole in a horizontal surface, 25 millimeters square and 4 to 6 millimeters deep, lettered "U. S."

NOTE 16.-The bottom of a hole in a horizontal surface, 25 to 30 millimeters square, 4 millimeters deep, not lettered.

NOTE 17.-A 3-inch aluminum or bronze disk lettered "U. S. Geological Survey B.M. \$250 fine or imprisonment for disturbing this mark. Elevation above sea----feet. Datum--." Each disk is stamped with the approximate elevation in feet and a letter or letters to indicate the datum plane. This elevation and datum letter or letters usually form the name by which the bench mark is designated in this publication.

NOTE 18.-This type of bench mark has the same lettering as that referred to in note 17, and is a 3-inch aluminum or bronze cap riveted upon a 3-inch iron pipe set in the ground, 5 to 6 inches being exposed above the ground. A cross cut in the center of the top is the bench mark.

NOTE 20.-A cross on the top of a section of rail set vertically in the ground. Those designated "M.M." (mile monument) mark the exact mile which is indicated by the numeral following; the others are designated "R.M." (rail monument).

NOTE 25.-This type of bench mark is a square post of concrete made of Portland cement and fine gravel, of the grade called artificial stone, somewhat finer than that of which sidewalk blocks are made. It is 4 ft. long, projecting 3 inches above the ground, 6 inches square at the base and 4 inches square at the top, with a copper bolt set flush with the top surface, which is lettered "U.S.B.M."

NOTE 42.-- A bench mark referred to this note is the highest point in a square cut in stone and marked thus: U  S.

NOTE 43.-- A bench mark referred to this note consists of a copper bolt leaded vertically into stone, the top of the bolt being the bench mark. It is lettered thus: U S

P B.M.

NOTE 44.-- A bench mark referred to this note is the center of a cross (+) cut on the cross section or end of a piece of railway rail set vertically in the ground.

NOTE 45.-- A bench mark referred to this note is the highest point in a square cut in a stone surface and marked: S D

P B.M.

NOTE 46.-- A bench mark referred to this note is center punch mark in the end of a copper bolt leaded into stone, and lettered: S D

P.B.M.

NOTE 49.-- A bench mark referred to in this note is the top of a copper bolt set vertically in the top of a truncated square pyramid of concrete built below the ground surface and surmounted by a square cast-iron cover with removable lid.

NOTE 50.-- A 3-inch aluminum or bronze disk lettered "U.S. Geological Survey B.M. \$250 fine or imprisonment for disturbing this mark."

NOTE 51.-- This type of bench mark is a 3-inch aluminum or bronze cap (lettered as in note 27) riveted upon a 3-inch iron pipe set in the ground.

NOTE 52.-- This type of bench mark is a plain iron cap, marked with a chisel "U S" and screwed upon a 4-foot or 4 $\frac{1}{2}$ foot iron pipe set in the ground. The base of the pipe is usually split and spread to a diameter of about a foot and set in cement.

NOTE 54.-- This type of bench mark is a 3-inch aluminum or bronze disk lettered "U.S. Reclamation service B.M. \$250 fine or imprisonment for disturbing this mark. Elevation above sea level-- feet. Datum--." The elevation and datum are stamped on the bench mark, and it is referred to in the same manner as in Note 17.

NOTE 55.-- This type of bench mark is the upper flat end of a section of railroad rail, from 2 to 2 $\frac{1}{2}$ feet long, set in stoned with 4 to 6 inches exposed. The upper end of the rail is stamped with a cross and the letters "U.S.B.M."

NOTE 56.-- A copper bolt set, usually with lead, into stone or brick, with the letters U.S.B.M. surrounding the bolt. When the bolt is set in a vertical support the exact point defined by the bench mark is indicated by a horizontal line or by the intersection of cross lines on the head of the bolt in a horizontal surface; otherwise the top of the bolt is the bench mark.

NOTE 57.-- A copper bolt set, usually with lead, into stone or brick; its head is divided into quadrants by cross lines, each quadrant containing one of the letters "U.S.B.M." The intersection of the cross lines is the bench mark.

NOTE 59.-- A brass plate, 10 centimeters in diameter, cemented into stone or brick flush with surface. The raised center is marked by cross lines, the intersection of which is the bench mark, and by the letters "U.S.B.M."

NOTE 60.-- A type of bench mark set by the U.S. Army Engineers. It consists of a concrete slab 16 by 16 by 4 inches set about 3 feet in the ground. A copper bolt is embedded in the concrete slab, which is also surmounted by an iron pipe 4 inches in diameter and 4 feet long with a cap bolted to its top. The center of the cap is directly above the bolt in the slab. Elevations are usually taken on both the bolt and the center of the cap.

NOTE 61.-- A type of bench mark set by the U.S. Army Engineers. It consists of an iron pipe, 3 inches in diameter and 5 feet long, set 4 $\frac{1}{2}$ feet into the ground and covered with cap. Elevations are taken on the knot of the cap.

U.S. Coast & Geodetic Survey - First Order Leveling.
Line #25 - El Reno, Okla. to Jericho, Tex.
Oklahoma Section

For Elevations in El Reno see "Manchester to Terral" Line #34; "Ft. Smith to El Reno" Line #23; and 20A Traverse.

- A-2 1909; At Fort Reno, Canadian Co., about 0.5 mi.SW of CRI&P RR Depot; on SW cor. of high steel water tank. (Note 5.) El. 1395.506 ft.
- B-2 1909; At Calumet, Canadian Co., about 100 m.W. of CRI&P RR Depot and 19 m. N. of C/L of main track on top of N. retaining wall of concrete which supports roadway leading into Farmer's Grain Co. (Note 4.) El. 1376.506 ft.
- C-2 1909; Calumet, Canadian Co., 180 ft.W. of small timber bridge No. 5305 of CRI&P RR; 1 $\frac{1}{4}$ poles W. of pole 530-15, on W. line of hwy. at crossing; 13.5 m.S. of C/L of main track. (Note 2.) El. 1444.341 ft.
- D-2 1909; At Geary, Blaine Co., 70 m.W. of W.end of CRI&P RR Depot; near W.end of triangular plot on which RR water tank stands & 4.9 m.N. of C/L of main track. (Note 11.) El. 1540.112 ft.
- E-2 1909; At Geary, Blaine Co., on low stone window sill on W.side of N.face of Geary Opera House. (Note 5.) El. 1549.902 ft.
- F-2 1909; At Geary, Blaine Co., on projecting foundation stone at NW.cor. of main entrance to public school bldg. (Note 5.) El. 1583.409 ft.
- G-2 1909; At Geary; Blaine Co., on E.cor. of NE concrete foundation of city water tank. (Note 4.) El. 1590.391 ft.
- H-2 1909; Blaine Co.; about 3.5 mi.S. of Geary; 75 m.S. of S.end of pile trestle No. 5385 of CRI&P RR. at entrance to a cut; 15 m.W. of C/L of main track. (Note 2.) El. 1430.315 ft.
- I-2 1909; Blaine Co., about 7.25 mi.SW of Geary; on W.end of N. concrete retaining wall supporting the embankment at end of steel bridge of CRI&P RR over south Canadian River. (Note 1.) El. 1407.451 ft.
- J-2 1909; At Bridgeport, Caddo Co., about 240 m.E. of CRI&P RR Depot; 41.5 m.S. of C/L of main track; on E. property line of extension of Main Street. (Note 2.) El. 1425.837 ft.
- K-2 1909; Caddo Co., about 2.5 mi.W. of Bridgeport; 400 ft.W. of W.end of pile trestle No. 5459 of CRI&P RR. 550 ft.W. of hwy. crossing directly opposite mile pole 546; 18 m.S. of C/L of main track. (Note 2.) El. 1428.901 ft.
- L-2 1909; At McCool, Caddo Co., 180 m.E. of station of CRI&P RR; 15.9 m.S. of C/L of main track just outside R/W; at SW. property cor. at hwy. crossing. (Note 2.) El. 1444.420 ft.
- M-2 1909; Caddo Co., about 2 mi.E. of Hydro on S.end of W. concrete pier of plate-girder bridge #5526 of CRI&P RR over Deer Creek. (Note 4.) El. 1469.101 ft.
- N-2 1909; At Hydro, Caddo Co., on SW.cor. of red sandstone bldg. at NE.cor. of Main & Caddo Sts. occupied in 1909 by P.O.; set horizontally facing Main St., 0.3 m. above sidewalk. (Note 1.) El. 1557.477 ft.
- O-2 1909; At Hydro, Caddo Co., 55 m.W. of W.end of CRI&P RR Depot and 4 m.N. of C/L of main track; near W.end of gravel platform of station. (Note 11.) El. 1489.026 ft.
- P-2 1909; Caddo Co., about 2.2 mi.W. of Hydro; on N.end of W.concrete abutment of plate girder bridge #5568 of CRI&P RR over Deer Creek. (Note 4.) El. 1497.628 ft.
- Q-2 1909; Custer Co., about 2.8 mi.E. of Weatherford; 400 ft.W. of W.end of pile trestle bridge No. 5599 of CRI&P RR; 14.3 m.S. of C/L main track and directly opposite mile pole 560. (Note 2.) El. 1566.601 ft.
- R-2 1909; At Weatherford, Custer Co., 44.9 m.W. of W.end of depot and 6.9 m.N. of C/L of main track. CRI&P RR; near Broadway crossing. (Note 11.) El. 1545.902 ft.
- S-2 1909; At Weatherford, Custer Co., at SW.cor. Broadway & Main Sts. 0.4 m. above the sidewalk; in stone foundation of brick bldg. occupied in 1909 by First Nat. Bank of Weatherford. (Note 1.). El. 1659.590 ft.
- T-2 1909; Custer Co., about 2.6 mi.W. of Weatherford; near middle of fourth curve W. of Weatherford depot; on CRI&P RR; 3.5 m.below top of rail; in center of N. spandrel wall of reinforced concrete culvert. (Note 4.) El. 1694.025 ft.
- U-2 1909; Custer Co., 3.4 mi.W. of Weatherford; on S.end of E.concrete abutment of plate girder bridge #5652 of CRI&P RR. (Note 4.) El. 1,723.661 ft.
- V-2 1909; Custer Co., 4.8 mi.W. of Weatherford; on top of cut on divide between S. Canadian and Washita Rivers; 10 $\frac{1}{2}$ poles E. of mile pole 568; 14 m.SW. of C/L of main track; just inside R/W of CRI&P RR. (Note 2.) El. 1799.288 ft.
- W-2 1909; Custer Co., 2 mi.E. of Indianapolis; 4 poles W. of mile pole 571 on CRI&P RR 13.4 m.S. of C/L of main track; on W.line of N-S hwy. at crossing on curve. (Note 2.) El. 1678.008 ft.
- X-2 1909; At Indianapolis, Custer Co., nearly opposite a large grain elevator; just inside R/W of CRI&P RR; 44 m.SE. of a point on C/L of main track. (Note 2.) El. 1666.165 ft.
- Y-2 1909; Custer Co., about 3.8 mi.W. of Indianapolis; 650 ft.SW of CRI&P RR pile trestle #5768 over Turtle Creek; 32 m.NW. of C/L of main track; on N.line of E-W hwy. at crossing near mile pole 577. (Note 2.) El. 1530.046 ft.

Z-2 1909; Custer Co., about 1.4 mi.N.E. of Clinton; 0.5 mi.E. of crossing of CRI&P RR and St.L. & SF.RR; on S.end of bridge seat of E.concrete abutment of one-span steel bridge of former railway over Washita River. (Note 1.) El. 1490.368 ft.

A-3 1909; At Clinton, Custer Co., directly opposite N.end of St.L & SF.RR passenger depot; 8.4 m.E. of C/L of main track. (Note 11.) El. 1517.169 ft.

B-3 1909; At Clinton, Custer Co., at SW.cor.of Frisco Ave.& Fifth St. in first stone above Frisco Avenue sidewalk; on W.end of brick and stone bldg. of C.G.Welch. (Note 1.) El. 1565.486 ft.

C-3 1909; At Clinton, Custer Co., near cor.of Choctaw Ave.& Sixth St. on W.cor. of SW.concrete pier supporting city water tower.(Note 4.) El. 1566.276 ft.

For additional elevations in Clinton see "Clinton to Vernon Tex."Line #66."
"Seiling to Clinton" Line #30; also 9-D Traverse.

D-3 1909; Custer Co., about 1 mi.N.of Clinton; on face of N.concrete abutment of plate girder bridge, on which the A.T. & S.F. RR crosses the C.R.I.P. RR; 1 m. above tracks of latter railway & 2 m.from E.face of abutment. (Note 4)

El. 1496.408 ft.

E-3 1909; Custer Co., about 3 mi.W.of Clinton;just inside R/W of CRI&P RR;12 m. N. of C/L of main line track; 110 m.W.of private road crossing at top of grade. (Note 2.) El. 1547.375 ft.

F-3 1909; Custer Co., about 2 mi.N.E.of Parkersburg;on SE.stone support of railroad water tank. (Note 5.) El. 1544.866 ft.

G-3 1909; Custer Co., at Parkersburg; 135 m.W.of railroad station; 17 m.S. of C/L main track of C.R.I.P. RR; at W.end of cut on edge of swamp. (Note 2.) El. 1524.715 ft.

H-3 1909; Custer Co., about 5.7 mi.W.of Parkersburg; 1 pole E.of mile pole 591; at Alfalfa spur of C.R.I.P. RR; just inside road line; near RR property cor;near NS road crossing; 14 m.S.of C/L of main track at E-W road crossing. (Note 2.) El. 1578.199 ft.

I-3 1909; Washita Co., at Foss; about 100 m.E.of C.R.I.P. RR depot; 8 m.S. of C/L of main track; 45 m.E.of Adams St. Crossing; in front of Foss Mill & Elevator Co's building. (Note 11.) El. 1625.659 ft.

J-3 1909; At Foss,Washita Co., at NW.cor.of Adams and Main Sts.slightly above sidewalk on a projecting basement stone at SW.cor.of brick bldg.of Foss Mercantile Co. (Note 5.) El. 1640.886 ft.

K-3 1909; At Foss, Washita Co., near W.end of CRI&P RR. Depot on NE.cor.of E. one of two stone piers nearest track which support columns of RR.water tank. (Note 5) El. 1628.550 ft.

L-3 1909; Washita Co., about 3.7 mi.W.of Foss; just inside R/W of CRI&P RR; 2 poles W.of mile pole 598; at W.end of cut on third curve W.of Foss, and 14 m.S.of C/L of main track. (Note 2.) El. 1758.143 ft.

M-3 1909; At Canute, Washita Co., just inside R/W of CRI&P RR; E. end of section house, nearly opposite E.end of RR depot and 45 m.N.of C/L of main track. (Note 2.) El. 1903.234 ft.

N-3 1909; Washita Co., about 3.4 mi.W.of Canute; on base of SE one of four central stone piers supporting wooden columns of water tank belonging to CRI&P RR. (Note 5.) El. 1944.471 ft.

O-3 1909; Beckham Co., about 1.6 mi.E.of Elk City;near fence line on E.side of road at crossing 1 mi.W.of Washita-Beckham Co.line road; 15 m.S.of C/L of main track of CRI&P RR. (Note 2.) El. 1942.854 ft.

P-3 1909; Elk City, Beckham Co., on R/W of CRI&P RR; 43.6 m. E. of E.cor.of RR. Sta., and 17 m.SE.of C/L of main track. (Note 11.) El. 1914.255 ft.

Q-3 1909; At Elk City, Beckham Co., at SE.cor.of Broadway and Main Sts; 0.7 m. above sidewalk; in water-table stone on left side of cor.entrance to Thurmond Bldg. occupied by First State Bank. (Note 1) El. 1926.285 ft.

R-3 1909; At Elk City, Beckham Co., at NW.cor.of Jefferson and Broadway Sts. on stone window sill near sidewalk level on S.side of bldg.occupied by German State Bank. (Note 5) El. 1931.089 ft.

S-3 1909; Beckham Co., about 5.0 mi.SW.of Elk City; just inside R/W of CRI&P RR; at NW.cor.of road crossing at highest point of RR between El Reno and Sayre; 14 m.N. of C/L of main track. (Note 2) El. 2092.237 ft.

T-3 1909; At Meritt, Beckham Co., directly opposite station of CRI&P RR; 42 m. N.of C/L main track and just E.of gate to private road. (Note 11) El. 2051.233 ft.

U-3 1909; At Doxey, Beckham Co. on S.side of one of stone piers supporting columns of CRI&P RR water tank. This pier is W.one of second row from track; (Note 5) El. 1837.982 ft.

V-3 1909; At Doxey, Beckham Co., 18.1 m.E.of E.end of CRI&P RR Depot and 10.7 m. N. of C/L of main track. (Note 2) El. 1837.500 ft.

W-3 1909; Beckham Co.,about 1.2 mi.E.of CRI&P RR.Depot at Sayre; 10.5 m.S.of C/L of main track; on E. line of N-S road at crossing. (Note 2). El. 1839.596 ft.

X-3 1909; Beckham Co., about 0.7 mi.E.of depot; in center of top S.spandrel wall of small conc. culvert on CRI&P RR. (Note 4) El. 1817.949 ft.

Y-3 1909; At Sayre, Beckham Co., at SW.cor.of Main and Fourth Sts. 1 decimeter

above Main St. sidewalk; on base stone near center of N.face of Thurmond Block; the corner room of which is occupied by First State Bank. (Note 1.) El. 1807.093 ft.

Z-3 1909; At Sayre, Beckham Co., just W.of CRI&P RR dining house; directly across from coal chutes at depot; 45 m.S.of C/L of main track; on S.fence line of E-W road (Note 11.) El. 1810.564 ft.

A-4 1909; Beckham Co., about 4.1 mi.W.of CRI&P RR depot at Sayre; 4 poles W. of mile pole 631, near private road crossing at W.end of first sizeable sandy cut W. of Cane Mill Spur, 15 m.N.of C/L of track. (Note 2.) El. 1844.832 ft.

B-4 1909; At Hext Ranch, Beckham Co., 45 m.N.of C/L of main track of CRI&P RR; 115 m.W.of NW. property cor. at road crossing near cotton gin. (Note 2.) El. 1930.518 ft.

C-4 1909; Beckham Co., about 2.0 mi.E.of Erick; just inside R/W; at E.end of sandy cut on CRI&P RR; 1 pole W.of mile pole 639; 14 m.N.of C/L of main track. (Note 2.) El. 2024.507 ft.

D-4 1909; At Erick, Beckham Co.; at cor. of Main and Broadway Sts. on E. face of First State Bank Bldg.in base stone to left of cor.entrance; 1 decimeter above sidewalk; (Note 1.) El. 2061.384 ft.

E-4 1909; At Erick, Beckham Co., 130 m.W.of ticket office in CRI&P RR Depot; 75 m.W.of Main St.crossing; 12.8 m.N. of C/L of main track in line with telegraph poles. (Note 11.) El. 2061.439 ft.

F-4 1909; Beckham Co. about 2.6 mi.W.of Erick; 14 m.N.of C/L of main track of CRI&P RR: just inside R/W; at NW. intersec. at hwy. crossing. (Note 2.) El. 2022.069 ft.

G-4 1909; At Texola, Beckham Co., 650 ft.E. of Ticket Office in CRI&P RR Depot; 315 ft.E.of road crossing; 10.9 m.N.of C/L of main track in line with telegraph pole and just W.of sec. house. (Note 11.) El. 2147.325 ft.

H-4 1909; At Texola, Beckham Co. on E.end of conc.foundation of CRI&P RR.depot; 1.15 m.from SE.cor.of bldg. 0.25 m.above ground and 1.2 m.below top of window sill. (Note 1.) El. 2151.406 ft.

U. S. Coast & Geodetic Survey - Second Order Leveling.
Line #27 From Mangum Okla., to Atoka, Okla.

Q-30 1934; Greer Co., 1.3 mi.E.of Mangum; W.of Granite at CRI&P RR crossing; 40 ft.S.of track; 40 ft.W.of C/L of road in R/W fence corner; 1000 ft.SE of farmhouse. (Note 1.) El. 1598.258 ft.

P-30 1934; Greer Co., 4 mi.W.of Granite on CRI&P RR; at river bridge #926; $\frac{1}{2}$ mi.W.of RR crossing; mark in E.end of bridge in S.end of E.pier; 5 ft.below track; standard disk set in concrete abutment. (Note 1.) El. 1539.685 ft.

N-30 1934; Greer Co., 1 3/4 mi.W.of Granite on CRI&P RR at road crossing and section line; 80 ft.S.of track; 35 ft.E.of C/L of road; in fence cor. (Note 1.) El. 1587.503 ft.

L-30 1934; Greer Co., at Granite; in SE.cor.of CRI&P RR depot; set vertical 0.5 ft. above ground. (Note 1.) El. 1604.288 ft.

M-30 1934; Greer Co., at Granite P. O. set vertical in NE cor. of brick wall 5 ft. above ground (Note 1.) El. 1618.409 ft.

K-30 1934; Kiowa Co., 6.4 mi.E.of Granite;approx. .5 mi.N.of Granite Reformatory; on CRI&P RR at road crossing; 40 ft.S.of track in R/W fence line; 30 ft.E.of C/L of RR. (Note 1.) El. 1614.288 ft.

J-30 1934; Kiowa Co., 4.8 mi.W.of Lone Wolf depot; on CRI&P RR bridge over N. fork of Red River at S. end of E. abutment; 5 ft. below track. (Note 1.) El. 1552.917 ft.

H-30 1934; Kiowa Co., 2.1 mi.W.of Lone Wolf; at intersection of CRI&P RR and section line road; 40 ft.S.of track in fence cor.; 60 ft.W.of C/L of road. (Note 1.) El. 1602.479 ft.

G-30 1934; Kiowa Co., 400 ft.SW from CRI&P RR depot; in NW leg of concrete base of water tower 4" above ground; 200 ft.S.of track; (Note 1.) El. 1574.091 ft.

F-30 1934; Kiowa Co., at Lone Wolf P.O; 6 ft.S.of W.entrance; in brick wall 5 ft. above ground vertical; 1 block S. of CRI&P track. (Note 1.) El. 1576.742 ft.

E-30 1934; Kiowa Co., 1.0 mi.E.of Lone Wolf RR. depot, at intersec. of CRI&P RR and K.C.M.&O. RR; 100 ft.N.of CRI&P track and 75 ft.E. of Orient track. (Note 1.) El. 1574.446 ft.

D-30 1934; Kiowa Co., 3.2 mi.E.of Lone Wolf depot; on CRI&P RR at crossing; 400 ft.SW. of meter house of pump line; 40 ft.N. of track and 30 ft.W.of C/L of road. (Note 1.) El. 1585.627 ft.

C-30 1934; Kiowa Co., 4.5 mi.W.of Hobart at CRI&P RR crossing;75 ft.N.of track 40 ft.W.of road C/L. (Note 1.) El. 1568.189 ft.

B-30 1934; Kiowa Co., 2.3 mi.W.of Hobart CRI&P RR depot; at RR crossing; 100 ft. N. of track; 200 ft.E.of RR crossing; in N. fence line; at telephone pole #8. (Note 1.) El. 1507.192 ft.

A-30 1934; Kiowa Co., at Hobart in CRI&P RR depot; 6 ft. to left of white waiting room door; 5 ft. above ground vertical; S. wall facing track. (Note 1.) El. 1550.906 ft.

A-29 1934; Kiowa Co., 0.2 mi. S. of St. L & S.F. RR depot; 30 ft.W.of track,

about level with rails; 40 ft. S. of CRI&P RR track at junction with St.L. & S. F. RR in SW cor. of RR crossing. (Note 1) El. 1538.865 ft.

R-30 1934; Kiowa Co., 2.0 mi.E. of CRI&P RR depot at Hobart; at OK Hwy.# 9 and four corners; also RR crossing; State Hwy. MP;50 ft. N. of track. (Note 1) El. 1566.693 ft.

S-30 1934; Kiowa Co., 3.7 mi.E. of Hobart depot on CRI&P underpass; bridge #673 10 ft. below track; 100 ft. N. of track in fence line; (Note 1) El. 1548.796 ft.

T-30 1934; Kiowa Co., 5.8 mi.E. of Hobart depot; on CRI&P RR at crossing; 400 ft. E.of Komalty depot; 75 ft.S.of track in fence line; just E.of, and across road from P. O. (Note 1) El. 1559.636 ft.

U-30 1934; Kiowa Co., 7.9 mi.E. of Hobart depot; at CRI&P RR intersection with section line; 50 ft.S.of track; 40 ft.E.of road, in fence cor. (Note 1) El. 1514.052 ft.

V-30 1934; Kiowa Co., 9.9 mi.E. of Hobart depot; at CRI&P RR and section line intersec. 100 ft.S. of track; 40 ft.E.of C/L of road; in fence cor. 1200 ft.E.of bridge #613; (Note 1) El. 1467.573 ft.

W-30 1934; Kiowa Co., 0.7 mi.W. of Gotebo; at CRI&P RR crossing 100 ft. S. of track; 400 ft.SE. of wood trestle #591; at NW. cor. hwy. bridge level with track. (Note 1) El. 1421.277 ft.

Y-30 1934; Kiowa Co., 1000 ft.W. of CRI&P RR depot; at S.side of track, 30 ft. SE. of Standard Oil bulk station. (Note 1) El. 1430.184 ft.

Z-30 1934; Kiowa Co., 2.2 mi.E. of CRI&P RR depot, Gotebo; $\frac{1}{2}$ mi.W. of sec. line and cross roads; in SE.cor.of hwy.bridge; 125 ft.N. of CRI&P RR.bridge #562. (Note 1) El. 1418.435 ft.

X-30 1934; Kiowa Co., at Gotebo P.O. in second step entering the post office. (Note 1) El. 1432.297 ft.

A-31 1934; Kiowa Co., 4.5 mi.E. of CRI&P RR depot at Gotebo; at sec. line and cross roads; about 0.1 mi.S. of a cluster of farm bldgs., 50 ft.S. of OK.Hwy.# 9. (Note 1) El. 1414.902 ft.

B-31 1934; Kiowa Co., 6.6 mi.E. of Gotebo; in SW.cor. of concrete underpass on OK. Hwy. # 9; 12 ft.directly below RR.track. (Note 1) El. 1349.088 ft.

C-31 1934; At Mountain View, Kiowa Co., about 60 ft.W. of CRI&P RR depot; in NW cor. of park; 30 ft.S. of RR track. (Note 1) El. 1335.640 ft.

D-31 1934; At Mountain View, Kiowa Co., 1 block S.of CRI&P RR depot; set vertical in a two story brick bldg., drug store; in E.wall, 5 ft.above walk and 15 ft.S. of NE cor. (Note 1) El. 1339.098 ft.

E-31 1934; Kiowa Co., 2.1 mi.E. of CRI&P RR depot at Mountain View; on RR crossing and section line; 40 ft.S. of track and 30 ft.W. of section line road; 5 ft.below track. $\frac{1}{4}$ mi.S. of farmhouse. (Note 1) El. 1333.488 ft.

F-31 1934; Kiowa Co., 4.1 mi.E. of Mountain View; in fence line of CRI&P RR; on top of small cut; 10 ft. above track; 75 ft.S. of sec.line; $\frac{1}{2}$ mi.S. of cluster of heevy timber. (Note 1) El. 1364.597 ft.

G-31 1934; Kiowa Co., 6.3 mi.E. of CRI&P RR depot at Mountain View; in S.end of W.concrete abutment of RR. bridge #446; 6 ft.below & 4 ft.S. of track; $\frac{1}{2}$ mi.N. of OK.Hwy. #9; near sec. line road; (Note 1) El. 1307.950 ft.

H-31 1934; Caddo Co., at Carnegie Fire Sta., center of W.wall to left of door vertical 5 ft.high; just across street from P.O. (Note 1) El. 1312.478 ft.

J-31 1934; At Carnegie, Caddo Co., in center of Carnegie Public Park; just across track and SE.from depot. (Note 1) El. 1308.311 ft.

K-31 1934; Caddo Co., 1.3 mi.E. of Carnegie; at overhead crossing of OK.Hwy.#9; E.side at foot of S.concrete support; about 6 ft. above track and 8 ft.S.on a footing extending eastward; 1000 ft. W.of sec. line. (Note 1) El. 1351.428 ft.

L-31 1934; Caddo Co., 3.6 mi.E. of Carnegie CRI&P RR depot; 20 ft.W. of RR crossing 60 ft.S. of track in fence line; house $\frac{1}{2}$ mi.E. of mark and wooded creek N.of track. (Note 1) El. 1304.961 ft.

M-31 1934; Caddo Co., 5.8 mi.E. of CRI&P RR depot, Carnegie; 50 ft.N. of track in fence line; 60 ft.W. of crossing; $\frac{1}{2}$ mi.S.from wooded stream. (Note 1) El. 1283.219 ft.

N-31 1934; Caddo Co., 8.2 mi.E. of CRI&P RR depot, Carnegie, at RR.crossing;40 ft. S.of track $\frac{1}{2}$ mi.E. of road corner at MP. 69-25; (Note 1) El. 1274.131 ft.

P-31 1934; Caddo Co., 0.3 mi.W. of CRI&P RR depot, Fort Cobb; in W.edge of Ft. Cobb at RR crossing; 40 ft.S. of track in fence line and 30 ft.E. of road. (Note 1) El. 1259.453 ft.

Q-31 1934; Caddo Co., at CRI&P depot,Ft.Cobb;25 ft.S. of track, 15 ft.W.of OK. Hwy. # 9; in fence line (Note 1) El. 1254.824 ft.

R-31 1934; Caddo Co., at Ft.Cobb in bank bldg., in E.wall near NE.cor.of door; set vertically about 5 ft. above walk. (Note 1) El. 1258.321 ft.

S-31 1934;Caddo Co., 1.7 mi.E. of CRI&P RR.depot, Ft.Cobb; at RR crossing; 60 ft. S.of track and 20 ft.E. of road. (Note 1) El. 1260.736 ft.

T-31 1934;Caddo Co., 5.5 mi.E. of CRI&P RR depot,Ft.Cobb; in SE.cor.of W.retaining wall of steel RR bridge #266; 5 ft.S.of track and level with rails; $\frac{1}{4}$ mi.SE.of OK.Hwy.#9. (Note 1). El. 1231.087 ft.

U-31 1934; Caddo Co., at Washita depot; 100 ft.S.of CRI&P RR at crossing; 50 ft.

W.of track; 20 ft.N.of road, in fence line. (Note 1) El. 1225.276 ft.
 V-31 1934; Caddo Co., 2.1 mi.S.of Washita depot; at RR crossing; 100 ft.E. of
 CRI&P RR track, in fence corner; 20 ft.N.of road; in wooded country. (Note 1).
 El. 1204.542 ft.

W-31 1934; Caddo Co., 1.4 mi.W.of CRI&P RR depot, Anadarko; in E.end of concrete
 retaining wall of RR bridge, top of S.wall level with track. (Note 1).
 El. 1189.935 ft.

X-31 1934; Caddo Co., 5.1 mi.W.of CRI&P RR depot, Anadarko. at RR. crossing,
 80 ft.N.of track, in fence cor., 12 ft.E.of road; 1000 ft.N.of small farmhouse.
 (Note 1). El. 1198.534 ft.

Y-31 1934; Caddo Co., at Anadarko in E.front of County Courthouse; in second
 step on S.side; about 2 ft. above ground. (Note 1). El. 1190.070 ft.

Z-31 1934; Caddo Co., at Anadarko, in City Hall; W.end of bldg., in first step;
 at 4th. & Main St. (Note 1). El. 1183.252 ft.

A-36 1934; Caddo Co., 0.7 mi.E.of CRI&P RR depot, Anadarko; at RR crossing;
 30 ft.S.of track; 40 ft.W.of sec. line road. (Note 1). El. 1183.902 ft.

B-36 1934; Caddo Co., 2.9 mi.E.of CRI&P RR depot, Anadarko. at RR. crossing;
 40 ft.S.of track; 15 ft.W.of road; $\frac{1}{2}$ mi.N.of OK.Hwy.#9; farmhouse $\frac{1}{4}$ mi.NE. (Note 1).
 El. 1158.977 ft.

C-36 1934; Caddo Co., 5.6 mi.E.of CRI&P RR depot, Anadarko; in NE.cor.of con-
 crete bridge in top of abutment,OK.Hwy.#9; 60 ft.S.of CRI&P RR. about level with
 track. (Note 1). El. 1158.216 ft.

D-36 1934; Caddo Co., 7.0 mi.E.of CRI&P RR depot, Anadarko; 50 ft.S.of track;
 in NE.cor.of top of abutment of bridge, OK. Hwy.#9. (Note 1). El. 1139.860 ft.

E-36 1934, Verden, Grady Co., SW.from CRI&P RR depot; 150 ft.S.of track; 10 ft.
 E. of sidewalk. (Note 1). El. 1135.263 ft.

F-36 1934; Verden, Grady Co., at Verden Bank; W.of door; set vertically 5 ft.
 above walk; 6 ft.E.of SE.cor.of bldg., 1 block N.of depot. (Note 1).
 El. 1138.069 ft.

G-36 1934; Grady Co., 1.7 mi.E.of CRI&P RR depot, Verden; at crossing and 4
 corners; in NE.cor.of U.S.Hwy. #62 bridge; level with end 60 ft.S.of track; house on
 S.side of road. (Note 1). El. 1126.094 ft.

H-36 1934; Grady Co., 3.8 mi.E.of CRI&P RR depot, Verden; 30 ft.S.of track and
 12 ft.E.of road at RR. crossing; via US.Hwy.#62; near filling station. (Note 1).
 El. 1110.401 ft.

J-36 1934; Grady Co., 5.9 mi.E.of CRI&P RR depot, Verden; in fence line of
 CRI&P RR; 30 ft.S.of track, 25 ft.N.of C/L of U.S.Hwy.#62. (Note 1). El. 1103.846 ft.

K-36 1934; Grady Co., at W.edge of Chickasha where U.S.Hwy.#81 crosses CRI&P RR
 track; 1 mi.N.of Oklahoma College for Women; 40 ft.S.of RR.track, 30 ft.W.of C/L of
 U.S.Hwy.#81. (Note 1). El. 1092.222 ft.

F-41 1934; Grady Co., at Chickasha; on NW. abutment of AT&SF RR bridge over
 Lime Creek; 45 ft.SE.of intersec.of CRI&P RR track and AT&SF RR track; 40 ft.NE. of
 CRI&P RR bridge over Lime Creek; 2 ft.below SW.rail. (Note 1). El. 1091.366 ft.

Chickasha, 1934; Grady Co., at Chickasha; set vertically on extreme NW.cor.of
 Chickasha water plant; 33 ft.N.of steps to W.entrance of bldg; $2\frac{1}{2}$ ft. above ground
 in concrete foundation of brick bldg. (Note 1). El. 1093.147 ft.

E-41 1934; Grady Co., at Chickasha; set vertically in E.face of stucco and
 brick CRI&P RR depot; 18 ft.S.of ticket office window; 5 ft.N.of N.door to main wait-
 ing room entrance and $3\frac{1}{2}$ ft.above platform. (Note 1). El. 1095.093 ft.

D-41 1934; Grady Co., at Chickasha; set vertically 2 ft.N.of E.cor.Chickasha
 Federal bldg.in pillar stone resting in foundation corner stone; $3\frac{1}{2}$ ft. above ground.
 (Note 1). El. 1095.867 ft.

G-41 1934; Grady Co., 1.0 mi.S.of CRI&P RR depot, Chickasha; 0.1 mi.SE.of
 junction of main line and Lindsay spur of CRI&P RR; 375 ft.SE.of RR bridge 437.1;
 105 ft. NE.of sec. house; 36 ft.E.of nearest rail of Lindsay spur line. (Note 1).
 El. 1083.348 ft.

REFERENCE BIBLIOGRAPHY

The publications listed below treat in detail various phases of survey field procedure and computations. They may be obtained from the Superintendent of Documents, Washington, D.C., at the prices indicated:

- Special Publication No. 8: "Formulas and Tables for Computation of Geodetic Positions" - Price 30¢
 Special Publication No. 14: "Determination of Time, Longitude, Latitude and Azimuth" - Price 45¢
 Special Publication No. 26: "Description of Work, Methods and Organization of the U. S. Coast and Geodetic Survey"
 Special Publication No. 28: "Application of the Theory of Least Squares to the Adjustment of Triangulation" - Price 25¢
 Special Publication No. 93: "Reconnaissance and Signal Building" - Price 30¢
 Special Publication No. 120: "Manual of First-Order Triangulation" - Price 40¢
 Special Publication No. 137: "Manual of First-Order Traverse - Price 30¢.
 Special Publication No. 138: "Manual of Triangulation Computation and Adjustment" - Price 60¢
 Special Publication No. 140: "Manual of First-Order Leveling" - Price 30¢
 Special Publication No. 145: "Manual of Second and Third-Order Triangulation and Traverse" - Price 60¢
 Special Publication No. 158: "Bilby Steel Tower for Triangulation" - Price 15¢
 Special Publication No. 190: "First-Order Triangulation in Oklahoma" - Price 15¢
 Special Publication No. 193: "Manual of Plane Coordinate Computations" - Price 35¢
 Special Publication No. 194: "Manual of Traverse Computation on the Lambert Grid" - Price 20¢
 Serial No. 347: "Use of Coast and Geodetic Survey Data in Surveys of Farms and Other Properties" - Price 5¢
