Abbreviations refer to pipeline companies as shown in the accompanying list. Diameters of pipelines are shown in inches; diameters of multiple pipelines are indicated by consecutive numbers, as 8, 10, 12; multiple pipelines of the same diameter are represented as 2-8. Many gathering pipelines are not shown. Locations of pipelines are approximate and, at places, are intentionally offset to separate different company lines. Junctions and stations are not shown and therefore crossing of lines has no implication. The map includes information made available to the Oklahoma Geological Survey by the pipeline companies through December 1965. The Survey gratefully acknowledges the assistance given by the companies involved.
