Oklahoma Oil and Gas Fields (Distinguished by Coalbed Methane and Field Boundaries)

Brittany N. Pritchett Oklahoma Geological Survey

Introduction

This map is an update of Dan T. Boyd's GM 37 (2002). It shows areas of oil, gas, and coal-bed methane production in Oklahoma. The randomly generated field colors on the map represent conventional oil and gas fields whereas the red signifies coalbed methane (CBM) fields. Active, abandoned, producing, and non-producing fields are not distinguished on this map. All field locations are listed by township and range. The townships and ranges with N, S, E, and W directions use the Indian Meridian. When "C" is used in the range column, the Cimarron Meridian is used (only in the Panhandle).

Data

All well data and most of the production data, except for CBM, were supplied by IHS Inc. Historical data from GM 36 was used when no production data were available. The CBM data used in this map come from a database maintained by OGS geologist Brian J. Cardott (http://www.ogs.ou.edu/coaldb.php) which does not contain wells with significant noncoal contributions.

IHS well and production data were used to construct this map. In some cases, field names attributed to specific wells in the IHS production database are different than the field names listed in the IHS wells

database for the same well. In such cases, the field names cited in the well database are used. Wells with IHS, Inc.'s Status Final Codes 0 (dry hole, temporarily abandoned), 8 (junked and abandoned well), 9 (injection, service, water-disposal well, CO₂, storage, pseudo-original well, mining borehole), A (abandoned location), D (injection well), L (permitted well), S (suspended well), and W (water supply) were removed prior to map construction.

Map construction

Guidelines given by Boyd (2002) for GM 36 map construction were also followed for this map. All fields were hand drawn in ArcGIS v. 10.2.2. Lines were not allowed to overlap, other than in major gas areas in Cimarron, Texas, Beaver, and Kay Counties. When overlap occurred outside of major gas areas, clear boundaries were made and space was left between the fields. When overlap was extreme, fields were combined. Wells in unnamed fields within 2 ½ miles of an established field were added into the established field. If located over 2 ½ miles from an established field, then a field name was assigned. Unnamed fields were labeled as Unnamed and given a corresponding number; wildcats were labeled as Wildcat and given a corresponding number; and if a new field was named in IHS then the name was kept as long as there were no previous fields of that name. Fields that were either

removed or added after the publication of GM 36 are listed in the attached appendixes.

In contrast to GM 36, CBM fields are not named on this map. The Oklahoma Corporation Commission reports CBM wells by county, not field. Due to the continuous nature of coalbed methane producing areas, the fields are drawn as continuous as the data and geology allow.
