SPECIAL PUBLICATION SERIES

The Oklahoma Geological Survey's Special Publication series is designed to bring timely geologic information to the public quickly and economically. Review and editing of this material has been minimized in order to expedite publication.

This publication, printed by the Oklahoma Geological Survey, is issued by the Oklahoma Geological Survey as authorized by Title 70, Oklahoma Statutes, 1981, Section 3310, and Title 74, Oklahoma Statutes, 1981, Sections 231-238. 1,200 copies have been prepared at a cost of \$10,370 to the taxpayers of the State of Oklahoma. Copies have been deposited with the Publications Clearinghouse of the Oklahoma Department of Libraries.

Oklahoma Oil and Gas Production

by Field 1990-93

INTRODUCTION

This publication is the first in a projected series of annual reports that provides data on reported oil and gas production and related information for each formally recognized field in the State. The data used to develop this report were extracted from the Natural Resources Information System (NRIS) for Oklahoma, an interdependent set of digital data bases containing monthly oil and gas production by lease, monthly oil and gas production by county, oil- and gas-lease records, an oil- and gas-field-boundary file, and completion reports for all recorded oil and gas wells drilled in the State. NRIS is being developed jointly by the Oklahoma Geological Survey and Geological Information Systems, an organized research unit of the University of Oklahoma.

A typical field record in this publication contains the name of the field, field code, date the field was formally recognized by the Oklahoma Nomenclature Committee (ONC), most recent update of the field boundary by the ONC, county(ies) in which the field is located, estimated size of the field in acres, four years of annual production (1990-93) by commodity, and cumulative production from 1979 through 1993 for the field. Cumulative production data prior to 1979 are not available from the Oklahoma Tax Commission in digital format, and therefore are not included in the NRIS system. Figure 1 is an illustration of a typical field record.

ARNETT SE - 025445		ONC Dates: Named - 1964, Last Update in 1986					
Production	Oil	Condensate	Total Liquids	Assoc. Gas	Natural Gas	Estimated Total Acres -	15,520
1990	75,376	6,424	81,800	430,037	982,609	1,412,646	
1991	57,807	7,351	65,158	396,569	1,165,005	1,561,574	
1992	42,570	9,655	52,225	308,563	1,010,615	1,319,178	
1993	34,687	6,552	41,239	275,268	941,685	1,216,953	
1979-1993	2,221,660	173,111	2,394,771	5,735,958	22,078,702	27,814,660	

Figure 1. Typical field-production record. "ARNETT SE" is the name of the field assigned by the ONC. "025445" is the particular code for this field, established by the EIA/DOE. If the code begins with an "X," it means that the code is temporary, pending a code assignment by EIA. "ONC Dates" refer to the date the field was originally named by the ONC, and the last update of the field's boundary. "Counties" refers to the location by county for the field. Multiple counties are listed where the field is located in more than one county. "Estimated Total Acres" is the land area included in the boundary of the field. Some of the included acreage in some fields may not be productive.

The Oklahoma Nomenclature Committee is a volunteer organization appointed by the Mid-Continent Oil and Gas Association. It is recognized by the State as the official body for formal recognition, naming, and boundary determination for all oil and gas fields in Oklahoma. The ONC concerns itself only

with producing areas designated as "fields," "districts," and "gas areas"; it does not address common sources of supply. The following definitions are considered to be basic to the work of the ONC:

- An oil and/or gas "reservoir or pool" is considered to be a single and separate common source of supply located in a single producing horizon.
- An oil and/or gas "field" is considered to be a unified surface area underlain by one or more oil and/or gas reservoirs or pools and is comprised of reasonably contiguous surface acreage.
- An oil and/or gas "district" consists of a multiple number of scattered producing areas—all more or less adjacent and in some instances consisting of separate small oil and/or gas fields—that are grouped together as one producing area for identification purposes.
- A "gas area" is considered to be a large area in which natural gas is produced from the same general source. Producing units may not be contiguous, but the area considered must have a general adjacency. Other oil and/or gas fields may be contained in the general surface description.

All fields, districts, and gas areas that have been formally recognized by the ONC are included in this report; for the sake of brevity, these will be listed as fields. Fields that have been classified as abandoned by the ONC also are included because many have developed production, commonly from new producing intervals, subsequent to abandonment. Additional information contained in the introductory portion of this publication includes production by county (Table 1) and a summary of production within each county that is not assigned to any formally recognized field (Table 2). Also included are charts depicting oil production from Statehood (1907) through 1993 (Figure 2), and gas production from 1947 through 1993 for the State (Figure 3).

This publication is produced in five parts (A through E) corresponding with the regional divisions depicted by the State map (Figure 4). Each part includes all fields contained in the referenced region, including those fields that extend across one or more regional boundaries (Table 3). Thus, some fields will be duplicated in one or more parts. Table 4 is a listing of discontinued field names for the region. Each part contains identical introductory material.

As noted, the field boundaries used in this publication are those defined by the ONC. Until the ONC determines extensions to a field boundary, some of the State's oil and gas production is classified as "unassigned," i.e., production that is not linked to a recognized field. To the extent that the field production volumes reported in this publication differ from those in other sources, it might be due to the treatment of these unassigned volumes, and whether those sources adhere to field boundaries as defined by the ONC.

Figure 2. Production of crude oil in Oklahoma from 1907 through 1993.

Figure 3. Production of natural gas in Oklahoma from 1947 through 1993.

The date for the latest revision of a field's boundary is included in the field record as an indication of the completeness of the field production data. When the ONC revises a field boundary, that field's production history also is revised to include the historical production for all leases incorporated into the field by that revision. Thus, changes in annual production totals for some fields will be evident when comparing this publication with those that will be issued in subsequent years. This will be especially true for those fields that are undergoing expansion through extension drilling.

Figure 4. Regional divisions of SP 94-4 defining each of the five areas.

Consolidations of fields by the ONC are addressed in the same manner. All producing leases contained in each of the prior separate fields, plus all additional leases that are contained in any boundary extensions, are included in the new field configuration.

As a further indication of the completeness of the field production data, the volume of unassigned production is listed for each county. An inspection of the unassigned production compared with the total production for a county will give an indication of the potential for under-reporting by field for that county.

Information on field boundaries is documented in the form of "blue sheets" by the Mid-Continent Oil and Gas Association. Copies may be purchased by contacting their offices at (405) 843-5741, or in digital format by contacting the OGS at (405) 325-3031.

NRIS Processing Steps

Field production totals reported in this document have been derived through the processing steps of the NRIS Oil and Gas Production subsystem. Within that subsystem, two primary interrelated files are maintained: the Lease Master and Field Master files. Both of these files are available to the public in printed or machine-readable forms. The two major data sources for this subsystem are the monthly tapes of lease gross production data from the Oklahoma Tax Commission, and the Oklahoma Nomenclature Committee blue sheets that contain the legal descriptions of oil- and gas-field locations. Field codes are obtained from the DOE/EIA Field Code Master List or, if the DOE/EIA code assignment for a new field name is not yet available, from a list of dummy codes (identifiable because they start with an "X") to be used until an official code is assigned.

The Lease Master file contains an historical record of all monthly production volumes since 1979 for each oil and gas lease within the State, and is updated each month based on the input from the Tax Commission tapes. For each product type, each volume transaction that has been reported to the Tax Commission is posted to the respective lease record, including transactions that contain corrections to the volume reports of previous months or years. Data obtained from Tax Commission records also include the lease name, location, producing formation, and operator and purchaser information.

The Field Master file is updated with data regarding new fields, field extensions, or discontinued fields whenever that information is determined by the ONC. Production data are derived for the field file through a computer match process in which the legal descriptions from the field locations are linked to the lease locations from the Tax Commission records. A field code is recorded on each lease record that has been linked to a field, and the volume updates that are posted to those lease records each month are thus aggregated to the field level as part of the routine processing.

In addition to the routine steps to process monthly volume transactions to the lease and field files, special actions are required to address various data-quality issues.

- In some areas of the State, there are field boundaries that overlap, primarily with gas areas such as Guymon-Hugoton and Mocane-Laverne. In these areas, a manual review process is

required to assure that leases are assigned to appropriate fields. Lease data such as the product type and producing formation are used to help determine appropriate field assignments.

- As mentioned previously, there are numerous producing leases that are outside of the recognized boundaries of oil and gas fields. NRIS project staff is working with the ONC to remedy this situation, with priorities given to those areas with the largest volumes of "unassigned production." Numerous maps and reports are generated regularly by GIS and OGS in support of this effort. As the ONC completes their review of an area, the field boundary updates are immediately entered into the NRIS system.
- With the large number of transactions reported to the Tax Commission each month, it is inevitable that some data errors will be introduced to the file. Those data errors are particularly obvious when they involve the reporting of production for invalid lease numbers, or when they result in oversized or negative production totals. Some of these errors are later corrected through subsequent Tax Commission transactions, but others are not. In order to maximize the quality of the NRIS production data, the NRIS project staff has undertaken a systematic effort to review obvious data errors and attempt to correct those errors whenever possible. Within this process, care is taken to "undo" any correction that also is addressed by a subsequent Tax Commission transaction. This risk of double-correction is greatest for the most recent data, and so most of the data targeted for review are several years old.
- Some errors also exist within the reported lease location data. While some of these errors are detected based on discrepancies between the identified county and the reported township/range, many of them can only be identified through special studies that are focusing on a particular field area. When these problems are detected, the NRIS well data are researched in an attempt to determine accurate locations.

Despite all of these attempts to maximize the data quality in the NRIS system, it must be acknowledged that perfect data require far more resources than can be allocated to NRIS. Users of these data must realize that, though the data have undergone extensive review and correction, there are still weaknesses that require prudent usage.

Related Information

The NRIS oil- and gas-well file contains nearly 400,000 records for wells reported to the Oklahoma Corporation Commission on Form 1002A. Examples of data elements included in the well-file records are the API well number (when available); lease name; location data by legal description; spud, completion, and first production dates; elevation; producing intervals; spacing data; perforations; well test results; producing status of the well; type of completion; formation tops; and casing and cementing information. Latitude and longitude values for well locations are generated using a digital land grid data base donated to the OGS by Phillips Petroleum Company.

The results of various investigations conducted by the OGS and GIS are being included in NRIS. These include data generated in the development of the Oklahoma portion of the Atlas

of Major Mid-Continent Gas Reservoirs, published in 1993 by the Bureau of Economic Geology at The University of Texas at Austin. This joint project produced information on all of the major natural gas plays in each state included in the atlas. Records for Oklahoma include data on 390 gas reservoirs included in 22 plays. The information generated on each field includes production data, producing intervals, lithologies, trapping mechanisms, and engineering and other petrophysical data.

A project currently being conducted by the OGS, in cooperation with GIS and the School of Petroleum and Geological Engineering at OU, is a five-year study of all light-oil, fluvial-dominated, deltaic reservoirs in Oklahoma. This study, funded jointly by DOE, OGS, and the University of Oklahoma, will provide production, geological, and engineering information on all FDD petroleum reservoirs in the State. These reservoirs will be organized into plays and a report on each play will be published. The data generated in this study will be incorporated into NRIS.

Future Plans

Information on the availability of well logs, and cores and samples from the OGS also will be incorporated into NRIS. Computerized data on cores currently are available in a separate data set; they will be incorporated into NRIS as soon as resources are available to accomplish that task.

Plans are under consideration to develop a program that will incorporate the plugging reports on Form 1003, available from the Oklahoma Corporation Commission, and to link those reports to the 1002A forms that are contained in NRIS. The Commission estimates that about 250,000 plugging reports are available in hard copy.

Acknowledgments

A joint committee between the Oklahoma Geological Survey and Geological Information Systems was established to prepare this publication. Michelle Summers (OGS) served as coordinator for the project. The other members included Mary Banken (GIS), Tom Bingham (OGS), Christie Cooper (OGS), Kathy Hines (GIS), and Anne Mycek-Memoli (GIS). These staff members and others from both organizations made important contributions to the development of this publication and to NRIS, without which publication of *Oklahoma Oil and Gas Production by Field, 1990–93* would not have been possible. Staff members from the Gross Production Division of the Oklahoma Tax Commission provide important, continuing support for the development of NRIS, and the work of the Oklahoma Nomenclature Committee, chaired by Tom Bingham (OGS), is essential to the success of this effort. The Oklahoma Geological Survey gratefully acknowledges these contributions.
