

Oklahoma Geological Survey
Dr. Jeremy Boak, Director

REVISED
Fairview Earthquake Fact Sheet

Date/Time: 02/13/2016 11:07am (CST)
Magnitude: 5.1 Mwr
Location: 10.26 miles SE of Waynoka, Oklahoma
Depth: 3.2 miles
Number of Felt Reports: 68*
Reported Damage: 0*

Fault Plane Solution

Aftershock Advisory

The magnitude 4.8 earthquake that occurred in Woods County is likely to trigger aftershocks, and has potentially already done so. Aftershocks are earthquakes that occur following a large earthquake, in the same general area as the earthquake, ranging from days to even a few years. The likelihood of an aftershock being larger than this earthquake is about 5%. Aftershocks have the potential to create damage, just like other earthquakes and are a normal occurrence after large earthquakes. They may be expected to continue and become less frequent with time. If you have observed damage to your residence or workplace, please note that further damage from aftershocks is possible.

Oklahoma Earthquakes

Nearly every county in Oklahoma has had an earthquake located within its boundaries. Earthquakes within the central United States can be felt by a significant percentage of the population over a widespread area, with the felt area being more than ten times larger than a similar earthquake on the West Coast. Moreover, damage may occur at greater distances from the epicenter. We encourage residents to report experiences to the USGS Did You Feel It? website: <http://earthquake.usgs.gov/earthquakes/dyfi/>

In the event of another earthquake or aftershocks, use the following protective protocol:

- Drop to the ground
- Cover your head and neck
- Hold on to any sturdy covering
